The DSE704 is an Auto Mains Failure Control Module that offers an excellent range of engine monitoring and protection features. The module has been designed to monitor engine temperature, low oil pressure, fail to start, charge failure, over speed and under speed.

When the module detects a fault condition it automatically shuts down the engine. The module also includes two user configurable auxiliary inputs.

The DSE4120 module includes all the features of the DSE704 plus a tamper proof engine hours counter, engine exercise mode function and the enclosure has a closed back.

Both modules have been designed to automatically start the generator when the mains (utility) power fails. As soon as mains (utility) power is restored the modules have been designed to transfer the load back to the mains (utility) supply. The modules then instruct the engine to begin the cool down procedure and stopping sequence (user configured).

**FEATURES**

- Automatic mains (utility) supply monitoring
- Automatic shutdown when fault conditions are detected
- Manual start
- Engine pre-heat
- Engine monitoring and protection features
- Protected Solid State (PSS) outputs
- Front panel mounting
- Front panel programming
- Tamper proof engine hours counter
- Remote start
- LED indicators
- Configurable timers
- Configurable outputs
- Single/three phase mains sensing

**BENEFITS**

- Transfers between mains (utility) and generator power
- On-site module configuration to match user requirements
- Hours counter provides accurate information for monitoring maintenance and warranty periods
- Multiple engine parameters are monitored simultaneously

**OPERATION**

The modules are operated using the three push buttons on the front:

- **MANUAL** – This mode is used to manually start the engine.
- **AUTO** – This mode is used to automatically start the engine. The module will be started by the remote start signal.
- **STOP** – This button is used to stop the engine when it is running in either manual or automatic mode.

**SPECIFICATION**

**SHOCK**

- BS EN 60068-2-27
- Three shocks in each of three major axes 15g in 1mS
The modules can be configured to match user’s individual parameter settings. Configuration mode is accessed via the switch at the rear of the module. Once in configuration mode the AUTO-LED flashes rapidly.

Please refer to the installation instructions for the parameter settings and configuration details.
