

DSEAssistant - Simplified Configuration File Upload / Download Tool

Overview

DSEAssistant is a streamlined software tool that enables users to quickly upload or download pre-configured settings to a DSE module, without the ability to modify them. This makes it ideally suited to fast paced manufacturing environments where consistency and speed are critical. Design engineers use the DSE Configuration Suite to create a settings file containing the required configuration, firmware, and language data. This file is then loaded into DSEAssistant for deployment. To apply the settings, the user simply connects the DSE module to a laptop or PC using a USB A to USB B cable and uploads the file via DSEAssistant. By removing the ability to alter configurations at the point of use, this process significantly reduces the risk of human error during manufacturing, helping to prevent potential downtime and safety issues.

Key Features

- Free to download and install.
- Easy to install with a simplified user interface for uploading and downloading of setting files.
- Simplifies DSE module programming, preventing configuration errors in production environments.
- Supports Windows 10 and 11, 32-bit and 64-bit operating systems.
